Subject: Question regarding gaskets

Dear Robert,

Thanks for the meeting update. Would it be helpful to schedule a teleconference with Olin and Oxy separately to see if there are other questions you and your team may have? We could then perhaps schedule a face-2-face to answer them?

I've not yet heard back from Chemours but I do know that they have reached out to their supplier.

Thanks,

Judith

Thank you for this list.

Also, as an FYI, myself and another EPA colleague spoke with a representative of Bergeson and Campbell, PC, (representing Oxy Chem) today after I was contacted by him following a meeting with EPA earlier in the week. He provided some additional discussion on diaphragm manufacture on behalf of Oxy Chem. We thanked him for this and also said we are interested in knowing what the differences were (even if minor and in compliance with regulatory requirements) for the asbestos handling practices at the plants we didn't visit.

Thanks and have a great weekend.

Dear Robert,

I hope you're doing well. Please find attached site locations using chrysotile asbestos diaphragm technology in their manufacturing process. Let me know if you have any questions. I'm currently on business travel but will be back in the office Monday morning.

All the best,

Judith

Thanks Judith for getting that info for us. Yes, I was aware of Axial's affiliation with Westlake and that they are not an ACC member.

Best,

-Robert

I don't have that readily at my disposal but we'll get it from my members. Just so you know, Axial is now owned by Westlake Chemical; I believe they acquired that company a couple of years ago. They are not American Chemistry Council or Chlorine Chemistry Division members.

Thanks,

Judith

Thanks for the update. Did you by chance already supply the name and addresses of member plants that currently use asbestos diaphragms? If not, is that something relatively easy to come by? I believe there were 14, not including the Axial plant.

I've heard back from Chemours regarding your questions. They are reaching out to their supplier for more information, so please stand by. The holiday has prolonged closing this loop but they are working on it.

I hope to have a response for you by the end of the week or early next week. And let me know if you would like me to make the appropriate introductions.

All the best,

Judith

Hi Judith-

Personal Matters / Ex. 6

Personal Matters / Ex. 6

As far gaskets, we do mention them in the scope. See page 23.

Sheet Gaskets

During the public comment period, one chemical production company notified EPA of the current use of imported gaskets from China (Comment ID EPA-HQ-OPPT-2016-0736-0067).

These sheet gaskets are composed of 80% (minimum) chrysotile asbestos, encapsulated in Styrene Butadiene Rubber, and used to create tight chemical containment seals during the

production of titanium dioxide.

I will definitely take you up on the offer for more info, one initial question I have is if there is any additional fabrication of the sheet gaskets in the United States, meaning does Chemours, or someone else in the supply chain, further fabricate the gaskets from a sheet that it receives from China, or are the products they use already fabricated and the gasket directly installed without further fabrication?

Best,

-Robert

Subject: Question regarding gaskets

Dear Robert,

I hope you're doing well and preparing for a long Independence Day weekend. Unfortunately, by the time I learned we have both Monday and Tuesday off the airfare to Louisiana was cost-prohibitive.

Question, Chemours, a Chlorine Chemistry Division's Associate Member, submitted comments to the docket addressing gaskets containing chrysotile asbestos. Chemours uses such gaskets for their high-temperature performance qualities.

The June 22 Scope of the Risk Evaluation for Asbestos did not include any gasket reference information. Is that product category part of your portfolio and if so, do you or your team need additional information? I'd be happy to facilitate introductions, meetings and/or fill any information/data gaps. Just let me know.

Thanks a million,

Judith
